

Macros in macro book: Essentials

14 macros (1,508 KB):

BrowseAuthority	Browses the Authority File using an existing heading or selected text within a field.
Check33X	Adds/changes RDA 33X fields.
CopyCallNumber	Gets a call number from an authority or bibliographic record and returns to a bibliographic record to paste it in.
CopyFields	Copies multiple fields from one bibliographic record and returns to another to paste them in. The copied fields can be a block of contiguous fields or a collection of separate, non-contiguous fields.
CopyToVoyager	Fixes the delimiter and some other character issues when copying text from a Connexion record to Voyager.
CutterMaker	Creates a Cutter for the selected text, with options including fitting a number into a range.
DeleteAllSuchPlus	Deletes all fields sharing characteristics of the field in which the cursor is placed. Those characteristics are the tag, subject thesaurus or term source, or subfield \$5.
DeleteFields	Deletes multiple contiguous fields, selected by clicking and dragging the mouse, all at once.
DuplicateFieldPlus	Copies a field and pastes it in a new field directly below the original, automatically making some useful changes in tag, indicators, and content.
FormatCallNumber	Formats an LC-type call number; checks for matching dates in the call number, 260/264 subfield \$c, and the fixed field; and copies the call number to the Clipboard.
GetAuthority	Gets the authorized heading (the 1XX field) from an authority record, returns to the bibliographic record, and pastes in the heading at the user's choice of tag, or a subdivision at an appropriate place in a subject heading. Also copies other information from the authority record for addition to the bibliographic record in the same operation.
KeywordSearchHelper	Helps construct a keyword search, including using a displayed record as a basis for the search terms.
RDAHelper(PrintedMaterial)	Makes changes to a bibliographic record for printed material (resources whose carrier type is "volume" or "sheet"—including books, maps, music scores, posters, etc.), to help convert it to RDA (ISBD) form.
RelatorHelper	Helps with verifying, adding, replacing, and deleting relator codes and terms, singly and en masse.

Macros in macro book: Extras1

18 macros (1,705 KB):

AddRBMSGenreTerm	Displays the list of RBMS genre terms to help find a term to add in a new field or to replace a field with the authorized term.
BreakField	Breaks a field at the cursor position, moving all subsequent text in that field to a new field, with a blank tag, immediately following.
ChangeCase	Changes the case of selected text within a field or of an entire field.
ClipboardSearch	Performs a directed search from text on the clipboard.
CopyDateTo264_4	Copies the date from a 264 #1 field to a 264 #4 field in an RDA record, adding the appropriate symbol for copyright and updating the fixed field to include both dates.
FixedFieldChecker	Fills in various elements of the fixed field from data in the variable fields of a bibliographic record. UNDER DEVELOPMENT
FixedFieldDater	Fills in the fixed field date elements from the record's 26X fields.
MakeTitleAddedEntry	Makes a title added entry field from selected text.
MusicFFHelper	Helps fill in elements in the fixed field for music materials: "AccM", "Comp", "FMus", "LTxt", "Part", and "TrAr". Also helps add or edit an 047 field.
PasteUnformattedPlus	Removes some formatting from text placed on the Clipboard for pasting into Connexion as a string or as a new field.
SearchAuthority5XX	Shows related headings (5XX fields) in an authority record in order to quickly retrieve the authority record for the selected heading.
Show006	Displays in user-friendly form existing 006 fields for confirmation or editing, and helps in adding new 006 fields for all types of material.
Show007Maps	Displays the codes in an 007 field for maps in a friendly way for verification and/or correction.
Show007Micro	Displays the codes in an 007 field for microforms in a friendly way for verification and/or correction.
Show007SoundRecs	Displays the codes in 007 fields for sound recordings in a friendly way for verification and/or correction.
Show041	Displays the language codes in an 041 field in a friendly way for verification and/or correction. Also compares codes to "Lang" in the fixed field and fixes discrepancies.
TitleFrom588	Changes source of title note tag to 588, or quickly adds selected source of title notes to certain formats: "cover" for volumes, "label" for discs, "container" for AV.
VisMatHelper	Helps correct and add fixed field and 007 field values in bibliographic records for visual materials.

Macros in macro book: Extras2

25 macros (1,081 KB):

AddRelatorTo100	Automatically adds a relator term in subfield \$e to the 100 field of a bibliographic record, according to the Type of record.
CalcScale	Calculates the representative fraction from the scale ratio on a map, and optionally adds that information in fields 034 and 255 in a bibliographic record for a cartographic resource.
CalcTimes	Adds and converts times.
CloseAuthorities	Closes all authority windows (records and lists).
CollationCheck	Compares leaf and page counts in the statement of extent (300 subfield \$a) and a standard signature statement.
ContinuingResourcesFFHelper	Helps with the fixed field on a record for continuing resources.
ConvertDateToYMD	Converts a date or date range into the format "Year Month Day."
CopyRecordToClipboard	Copies the displayed record, or a selection of fields in that record, to the Windows Clipboard in the classic layout, using only characters in ISO-8859-1.
CopySubjectSubdivisions	Copies subject subdivisions from one LC subject heading field to all similar subject heading fields.
DeriveBookFromAnyFormat	Derives a new record for a book from a bibliographic record of any format, or changes the format of a record to describe a book. Fields not applicable to a book are deleted, and default books workform values are used where appropriate information is lacking.
DuplicateField	Copies a field and pastes it in a new blank field directly following.
DupRecsReportHelper	Gets the OCLC control numbers of all opened bibliographic records and writes them to a text file to help in reporting duplicate records to OCLC.
EnhancedContentsCleaner	Allows enhanced contents notes to be unenhanced or improved.
FormatCopied6XX	Formats subject fields copied from outside Connexion, such as from a web OPAC, changing dashes to delimiters and adding some subfield codes.
GetCitationForm	Gets certain information from a bibliographic record and puts it into standard citation form for pasting into another bibliographic record as a 510 field.
GetHeadingMeta	Gets the authorized heading, the LCCN, and the cataloging agency from an authority record, and puts it in formatted form on the Clipboard for pasting.
Make773	Extracts information from a bibliographic record to construct a basic 773 field for an "in" analytic.
MapDistanceCalculator	Calculates distances using the map's scale.
OCLCCNQuickSearch	Searches WorldCat for the number string on the Windows Clipboard.
PasteInverted	Inverts a two- or three-word Clipboard selection for pasting into a record, by simply putting the last word first.
ReformatTOCs	Performs some simple reformatting of contents notes.

SearchFrom670	Searches for a bibliographic record from an authority record, using the authorized heading as the name portion of the search and selected text in the 670 field as the title portion and date qualifier.
ShowHeadingUse	Shows what the fixed field codes governing heading use in an authority record are.
UncontrolRestoreCursor	Uncontrols a heading but keeps the cursor in its original position.
ViewExportFiles	Shows the records in the defined export files and allows deletion of individual records or of the whole file being viewed.

Macros in macro book: MacroTools

10 macros (787 KB):

DialogBoxCharacters	Shows all the extended ASCII characters that are able to be displayed in a dialog box.
DialogBoxCodeStraightener	Aligns control coordinates in dialog box definitions and makes bulk changes in the coordinates of those controls.
FieldCount	Shows all fields in a record with their individual and total count, as well as the subject thesauri used in 6XX fields. Allows for filtering field display by tag groups.
GetEnvironment	Displays some environment variables.
MacroBookInspector	Lists the macros in a macro book, along with their descriptions and other information, and allows saving the list, or the text of an individual macro, to a text file.
MacroComparator	Displays two macro books, and selected macros from each, side by side for some simple metadata comparison.
MacroIndex	Lists all the macros and their descriptions in all the macro books in the default folder "Macros". Also lists the macros in individual macro books. Search for text in macro names and descriptions. Save all lists as text files.
RandomRecord	Searches for a random bibliographic record.
ShortcutKeysIndex	Lists all shortcuts that use the selected key, and copies lists of shortcuts to the Windows clipboard.
ShowItemType	Shows the item type of the current window.

Lists produced by macro "MacroBookInspector."
